

## Fangruida Quotes

Fangruida famously said: "The world is not a natural colorful garden. It requires the continuous pruning of weeds by all human beings to have deep roots and buds."

Primitive ape-agricultural civilization-industrial civilization-intelligent civilization-planet civilization, universe civilization. The birth and emergence of a new geological century. Mr. Reporter has repeatedly mentioned my personal life testimonials, and I tell you clearly: "Anyone in front of the great natural universe is an insignificant particulate dust, including great men and sages. Whether rich or rich or poor : Whether it is noble , Whether it 's cheap or not: whether it 's great, or whether it 's small: whether it 's Liufangbaishi, or whether it 's Baiju: whether it 's a golden coffin or a silver sash, or whether it 's cold and wild, everything is nothing but clouds and dust Just rain. Of course, the great meaning of a beautiful life includes endeavor and dedication. "" The greatness of a person is first of all what you can provide for humanity and this world, not the contrary, what this world can give you and what you give. "Of course, I have admitted that I have a unique love for the moon and Mars, including Black holes, super celestial bodies. If the final destination of life, I naturally think of the moon or Mars. It is very peaceful there, it is indeed paradise. I can rest in the vast and peaceful land of the moon or Mars, sleep there, and look at the blue earth .

Fangruida Quotes"Anyone in front of the great natural universe is an insignificant particulate dust, including great men and sages. Whether rich or rich or poor : Whether it is noble , Whether it 's cheap or not: whether it 's great, or whether it 's small: whether it 's Liufangbaishi, or whether it 's Baiju: whether it 's a golden coffin or a silver sash, or whether it 's cold and wild, everything is nothing but clouds and dust Just rain. Of course, the great meaning of a beautiful life includes endeavor and dedication.

Fang Ruida's most famous quote: "" galloping in the field of natural sciences, studying human society, I always promote it to advanced wisdom, rationality and spirituality: while in the field of philosophy and social sciences, studying human society often has to degrade it. Analyze the low-level animals that combine high-level wisdom and half-wildness born in the original natural form. ""

Professor Fang Ruida was interviewed by the news media to talk about the major issues of the world's top 10 search screens

2020-2100-2200 Ranking of global special events in 2015

◆! The Star Revolution, the Universe Revolution, the Moon Revolution, the Mars Revolution, and the immigration and transformation of the moon become a reality. Humans landed on Mars to build immigration sites, and Martians could reach ten million people. Lunar countryside, lunar city becomes possible. Mars immigration sites gradually expanded. Jupiter satellite, Saturn satellite, gold Intensity detection. There are many vocabularies in the world's hot search screens, but nothing more than these problems.

◆◆ 2 Global economic integration continues

Continue to strengthen and strengthen, the leading role of science and technology, capital, investment, industry, industry, industry, trade, popularization and utilization of new technologies, improvement of cultural education, large circulation of information, navigation, aviation, logistics, transportation, tourism The ever-growing development is unstoppable, the natural and inevitable trend of world development. Of course, global economic integration does not mean that the degree of retreat and

contraction is strengthened within a certain range. The competition game between developed countries, less developed countries, and relatively backward countries has changed significantly. The free market economy system and the semi-market economy system are the dominant forces and support of the world. Capital flow, technology leadership, market, labor, trade and other production methods and factors of production will not fundamentally change due to the global spread of the new coronavirus pneumonia. The laws of nature are difficult for anyone to change even if they are fairies.

◆◆◆ 3 The general pattern of the world is generalized, with the United States, China, Russia, India, Europe (EU) and other countries

In its place, the United Nations and other international organizations are relatively weakened and weakened, and have been strengthened to a certain extent (for example, nuclear wars, major global plagues, earthquakes and tsunamis, etc.). Not far away. The competition and intensified game between the big powers will inevitably lead to greater global instability and turbulence. Many factors are also increasing the risk of war. In the history of mankind, there has once again appeared the situation of hordes of rivalry, which can stretch for decades and hundreds of years. All kinds of politics, economy, culture, religion, military, science and technology, population, capital, resources, etc. compete in all aspects, and it remains to be seen who will die. The natural and inevitable historical process of the historical development and evolution of human history in the world. It is not surprising that there was a major change in 300 years and 500 years. Fighting and fighting, there is retreat in fighting, and there is peace and fighting without breaking, will become the new normal of the world stage competition performance. The so-called nuclear war duel cannot but be said that there is no slight possibility, but basically it should be ruled out, unless nuclear security completely controls the hands of the lunatics and the mad savages who are extremely mad. Why do you say that? During World War I and World War II, did the new coronavirus pneumonia, which is spreading all over the world, give us a major lesson and inspiration? I have talked more than once, no matter who wins or loses, for the natural universe, there is no natural or physical meaning; of course, for human society, it is extremely exciting and exciting. Is competition a good thing, as long as it is not vicious competition and mutual promotion, it is not a bad thing to chase after me, it is worth advocating and self-discipline. The Olympic Games is the world's biggest competition field, as well as the World Cup, big competition, big fight, why not do it? Both the Olympic Games and the World Cup have strict rules of competition. For example, do not use stimulants, beating others, referees, etc., otherwise the game will not proceed smoothly. Chess and Chinese chess both have a strict set of rules for the game, and competitions and competitions must strictly follow the rules. This is the most obvious truth, and all three-year-olds understand it. Failure to abide by the rules will eventually result in a disastrous defeat.

◆◆◆◆ 4 World Economy

Overall, it continues to develop at a high speed (except for epidemic situations and other major social crises, wars, natural disasters, and man-made disasters, etc.), guided by science and technology, led by scientific revolution, and technological revolution, industry, agriculture, and trade. The gap between poor countries in developed and underdeveloped countries is still widening, and the gap between rich and poor is difficult to close. The balanced development of the world requires long-term and unremitting efforts, especially the issue of poverty alleviation.

◆◆◆◆◆ Various countries in the 5th century have carried out various social changes, economic reforms, political reforms, cultural reforms, etc. that span over a hundred years to adapt to science and technology

Revolution, earth revolution, universe revolution, etc. Everyone knows that the situation is compelling, and if you do n't adapt or reform, you will be eliminated by history. Mr. reporter mentioned capital and capitalism. I would like to give a simple answer to this question. Capital has sprouted in ancient times. How to open a business without capital? Of course, it is very different from the capital of modern large industrial production, and the principle is the same. So, I said, how can there be a modern society without capital? Capitalism is a production method and a socialized and industrialized, highly efficient social organization production system. Although it has various drawbacks and defects, it is, after all, a naturally inevitable product of highly developed society and worthy of recognition. Of course, no system will be perfect. Trying to find and establish a perfect social system and economic system in the world is very rare, and it is also a kind of ignorance and absurdity. For its shortcomings and shortcomings, it is necessary to continuously analyze and reform, it is also necessary to hurt the bones.

With regard to privateness and communion, privateness and publicity must not be absolute, vulgar, and impoverished. After tens of thousands of years, human society will not abandon individuals and communities, even the lunar society and the Martian society. It is a flaw of thinking and a flaw of philosophy to reconcile privacy and opposition. Extremes and extremes are the enemy of all mankind, and its toxicity and virality must not be taken lightly. How can there be no community? There is also no community, how can an individual exist? Do animals have individualistic lusts, and of course, do they have communal colony and commensalism? They face death if they are single. There are many stars in the sky, and they are all individual entities. The earth, moon, sun, Mars, Jupiter, black hole, and the Milky Way are also individuals. You cannot mix them together. The universe is a community, and the planet is completely a private entity. The two complement each other and are not opposed. The same is true for particle quarks. Is the law of nature, man-made changes feasible? In any social development, the system model needs to be constantly evolving and evolving. It is impossible to stay the same. It also needs to be constantly recharged and improved. It must change after tens of thousands of years. However, the ever-changing sects, the individual, the community, and the two-body problem always exist and will not disappear. This is not only a particularly important economic and political issue, but also a very important philosophical and scientific issue. Scientific revolution and philosophical revolution must be among them. The strength and invincibility of capital lies in its limit stipulations, socialized industrial capital, commercial capital, agricultural capital, etc. It will be invincible, invincible and invincible.

◆◆◆◆◆◆◆◆ 6 The moon revolution, the Mars revolution, the earth revolution. Two poles Development and utilization of vast deserts, mountains, marine resources, etc. The development and peaceful use of nuclear energy. As the world 's population crosses the 10 billion to 15 billion warning line, resource consumption is crucial. The development of the earth, in this way, human beings can increase a considerable living space. Global can increase several Ten trillions or even trillions of dollars of wealth.

◆◆◆◆◆◆◆◆ 7 Within 100-200 years, particularly serious natural disasters, major plagues, major earthquakes, tsunamis, locust plagues, extreme climates, etc. will still occur worldwide. In the new active period of the earthquake, the plague spread. The impact of the large-scale local transmutation of the solar system and the cosmic structure on the earth, the moon, and Mars.

◆◆◆◆◆◆◆◆◆◆ 8 The new cultural education is deeply rooted in the hearts of the people. The integration of natural science, philosophy and social sciences, and humanities has become a trend. Elementary and secondary schools, universities, doctoral training partial and multi-disciplinary marriage. Planetary society's education and knowledge structure system is increasingly strengthened and integrated The construction model is multi-directional and multi-dimensional. The multi-dimensionality of philosophy and natural philosophy leads the transformation of the global wisdom revolution, thinking revolution, concept revolution, and life learning and working methods. Characteristics of modern people. Various doctrines, doctrines, and theories have clashed and flourished. Free rationality cannot be reversed, and the world is advancing steadily and orderly. Of course, there are rebounds, repetitions, and it is normal. The generality of human society is constantly moving from the realm of necessity to the realm of freedom. The more advanced things naturally inevitably replace the backward ones. This is the law of history. Therefore, if you do not advance, you will retreat. It is the same for any country and any nationality. Therefore, it is necessary to keep learning, continually renewing the old, new metabolism? It is absolutely necessary to stand still, to be arrogant and arrogant. Various theories and models compete freely, and human beings should be confident and open-minded.

◆◆◆◆◆◆◆◆◆◆ 9 Primitive ape-agricultural civilization-industrial civilization-intelligent civilization-planet civilization, universe civilization. The birth and emergence of a new geological century. Mr. Reporter has repeatedly mentioned my personal life testimonials, and I tell you clearly: "Anyone in front of the great natural universe is a tiny particle of dust, including great men and sages. Whether rich or rich : Whether it is noble , Whether it 's cheap or not: whether it 's great, or whether it 's small: whether it 's Liufangbaishi, or whether it 's Baiju: whether it 's a golden coffin or a silver sash, or whether it 's cold and wild,

everything is nothing but clouds and dust. Just rain. Of course, the great meaning of a beautiful life includes endeavor and dedication. "A person's greatness is first and foremost: what you can provide for mankind and this world, not the contrary, what this world can give you and what you are given." Of course, I once admitted that I have a unique love bell for the moon and Mars. Including black holes, super celestial bodies. If the final destination of life, I naturally think of the moon or Mars. It is very peaceful, it is indeed paradise. I can rest on the vast and peaceful land of the moon or Mars, sleep there, and look at the blue Earth.

◆◆◆◆◆◆◆◆◆◆ 10

Geographical development, regional development, popularization, balance and high-end. Developed countries are better than less developed countries. Less developed countries

Low-end urbanization

It is still impossible to change. It takes a long historical process to promote change.

Energy, resources, land, food, population, debt, cultural education, historical traditions, science and technology and other long-term constraints. Unpredictable factors or unexpected events are all possibilities for future development. For example, regional conflicts, territorial disputes, ethnic religions, etc. are also included.
